PLOTTING 3D GRAPHS OF THE VARIABLE X6 AFFECTING THE ECONOMIC SHELL OF VEU

Pil E.A.
Academician RANH, Dr. of Science., professor
St. Petersburg State University of Aerospace Instrumentation

Abstract

Based on the calculations made using the MS Excel program and the graphs based on them of the dependence of the variable X6 on other variables and the volume of the Veu economic envelope. 3D graphs and summary tables were built that allow you to select such values of the X6 variable that will minimize or even get out of any economic crisis with an increase in the country's GDP.

Keywords: calculations, MS Excel program, 3D graphics, GDP, the ways out of the economic crisis.

Often, when describing a large, medium or small business, the question arises how best to do this, so the author suggested describing the processes taking place in the housekeeper using the theory of shells, which, naturally, can be divided into the following three shells: the shell of large, medium and small businesses [1, 2, 3].

When exposed to external or internal pressure (or when they are combined), economic shells deform, i.e. their volume can either increase or decrease. An increase in the volume of the economic envelope of the Veu means an increase in the country's GDP, and a decrease in the economic envelope of the Veu leads to a decline in GDP, i.e. to an economic crisis. Therefore, this article discusses the issue of determining the values of the variable X6, on the basis of which their values will be selected, which can lead to an increase in the value of GDP in an economic crisis, or leave the country's GDP unchanged. Thus, here we consider the calculation of the variable X6 as a function of six other variables, i.e. X6 = f(X1,X2,X3,X4,X5,Veu).

So, below in Figures 1 and 2, 3D graphs X6 were constructed with X1= X4= 1..10, X2= X3= X5= 1 and X1= X2= X3= X5= 1, X4= 1..10 respectively. In these examples, the variable X6 in Figure 1 has a maximum of 4.51 at point 6, and in Figure 2 it increases by 1.18 times.

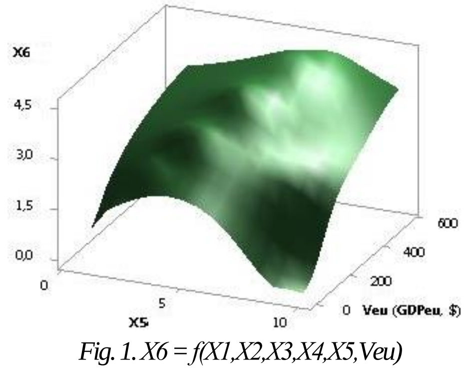

Fig. 1. X6 = f(X1,X2,X3,X4,X5,Veu)

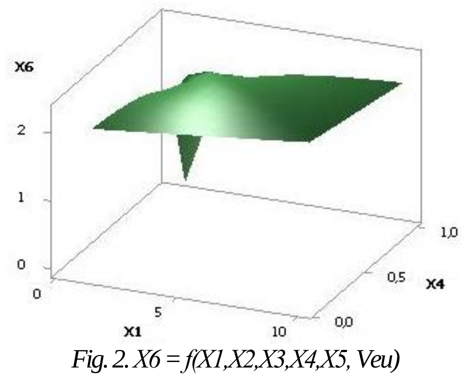

Fig. 2. X6 = f(X1,X2,X3,X4,X5, Veu)

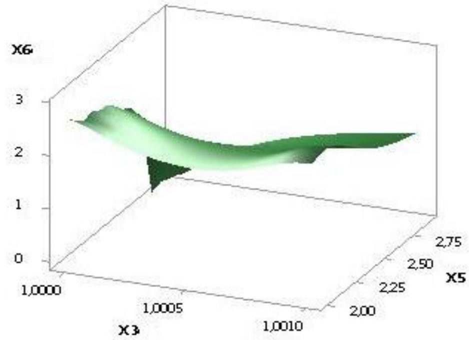

Fig. 3. X6 = f(X1,X2,X3,X4,X5,Veu)

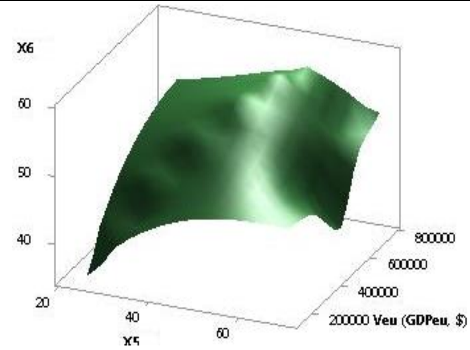

Fig. 4. X6 = f(X1,X2,X3,X4,X5,Veu)

Figure 3 shows a 3D graph X6, when the values of the variables were as follows X1= X2= X3= 1, X4= 1..10, X5= 1..0.1. As can be seen from this figure, the constructed 3D graph decreases by 1.72 times. The following Figure 4 shows a 3D graph X6 with variables X1= X2= 1, X3= X5= 1..0,1, X4= 1..10 has a maximum of 56.94 at point 7.

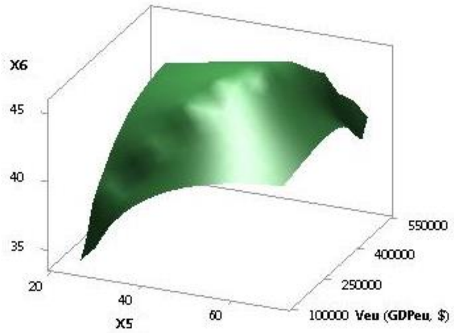

Fig. 5. X6 = f(X1,X2,X3,X4,X5,Veu)

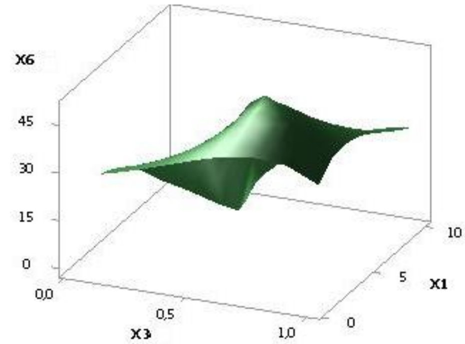

Fig. 6. X6 = f(X1,X2,X3,X4,X5,Veu)

The following two Figures 5 and 6 show 3D graphs X6, when the variables were X1= X2= 1, X3= X5= 1..0,1, X4= 1..10 and X1= 1, X2= X4= X5= 1..0,1, X4= 1..10 respectively. As we can see here, the constructed 3D graph X6 in Figure 5 has a maximum of 45.31 at point 6, and in Figure 6 has a maximum of 49.51 at point 4.

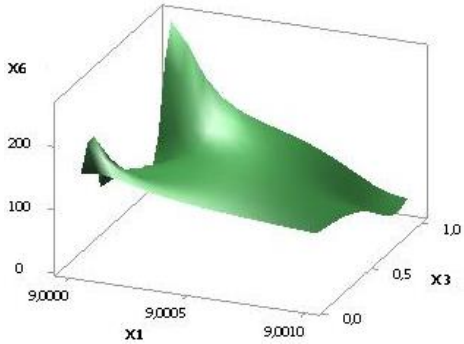

Fig. 7. X6 = f(X1,X2,X3,X4,X5,Veu)

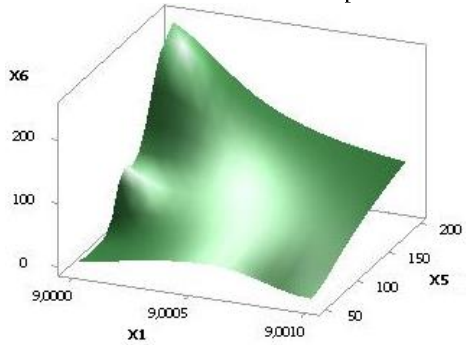

Fig. 8. X6 = f(X1,X2,X3,X4,X5,Veu)

Calculated values for the 3D graph X6 in Figure 7 for variables X1= X2= X3= X5= 1..0,1, X4= 1..10 has a maximum of 205.83 at point 9. From the following Figure 8 it can be seen that for variables X1= X2= X3= 1..0.1, X4= 1..10, X5= 0.1..1 the values of X6 increase by 23.45 times.

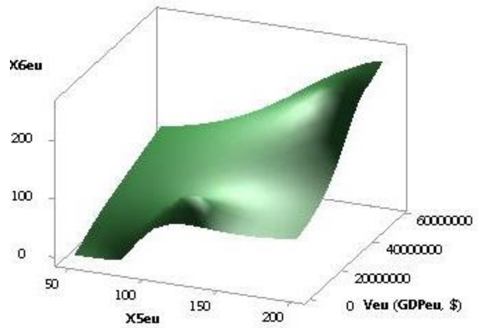

Fig. 9. X6 = f(X1,X2,X3,X4,X5,Veu)

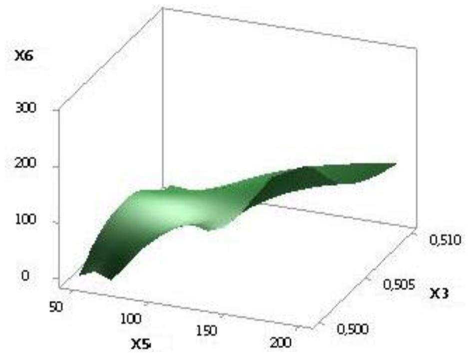

Fig. 10. X6 = f(X1,X2,X3,X4,X5,Veu)

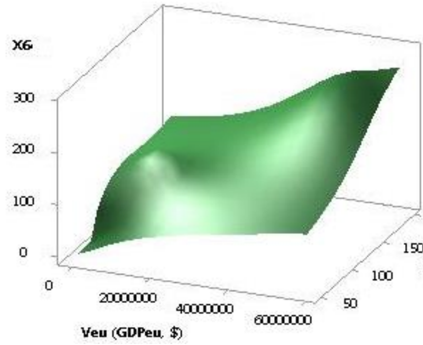

Fig. 11. X6 = f(X1,X2,X3,X4,X5,Veu)

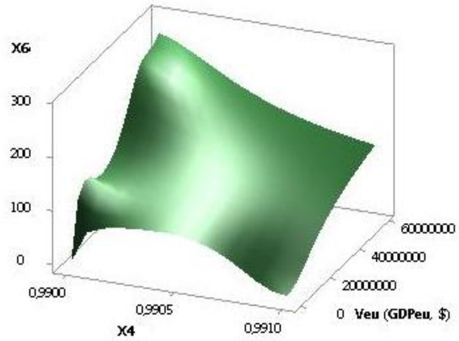

Fig. 12. X6 = f(X1,X2,X3,X4,X5,Veu)

Figures 9 and 10 were constructed at X1= 1..0.1, X2= X3= X5= 1, X4= 1..10 and X1 = 1, X2 = X3= X1= X5= 1..0.1, X4= 2.14..0.25. Here in Fig. 9, the dependence of X6 increases 7.13 times. In Fig. 10, the constructed dependence X6 increases by 8.87 times.

The following two figures 11 and 12 show 3D graphs X6 with X1= X2= X5=1, X3= 1..0,1, X4=1..10 and X1= X5=1, X2= X4=1..10, X3= 1..0,1, respectively. Here in Figure 11, the 3D graph X6 increases by 4.95 times, and in Figure 12 by 7.49 times.

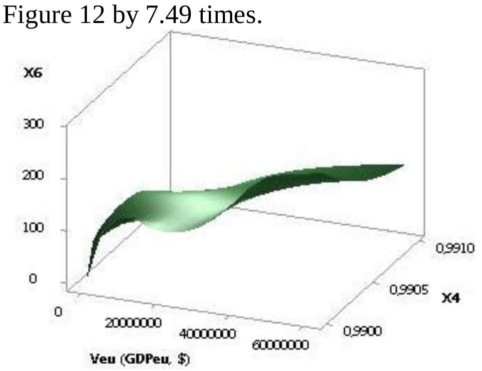

Fig. 13. X6 = f(X1,X2,X3,X4,X5,Veu)

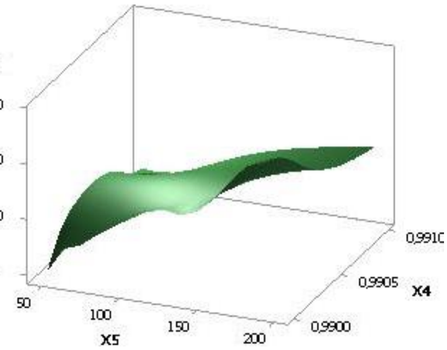

Fig. 14. X6 = f(X1,X2,X3,X4,X5,Veu)

The following two figures 13 and 14 dependences of X6 were constructed at X1= X3= 1..0.1, X2= X4= 1..10, X5= 1 and X1= X4= 1..10, X2= X3=1..0.1, X5= 1, respectively. Here in Fig. 13, the values of X6 increase by 5.47 times, and in Fig. 14 by 11.35 times.

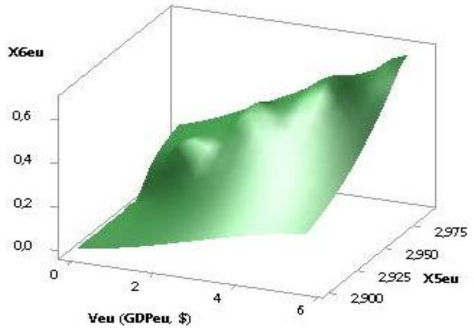

Fig. 15. X6 = f(X1,X2,X3,X4,X5,Veu)

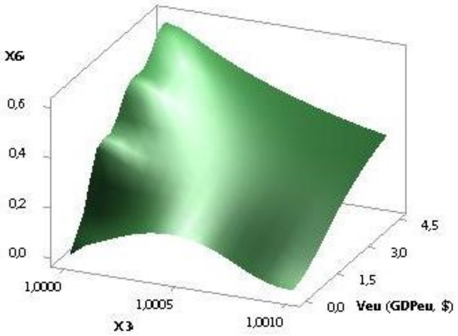

Fig. 16. X6 = f(X1,X2,X3,X4,X5,Veu)

The next Figure 15 shows a 3D graph X6, when the values of the variables were as follows X1= X2= 10..1, X3= 1, X4= X5= 1..10. It can be seen from the figure that the 3D graph increases by 2.25 times. Figure 16 shows a 3D graph X6 with variables X1= X2= 10..1, X3= 1, X5= X5= 1..10. Here the 3D graph increases by 7.58 times.

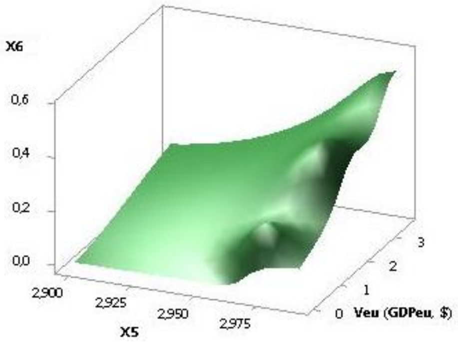

Fig. 17. X6 = f(X1,X2,X3,X4,X5,Veu)

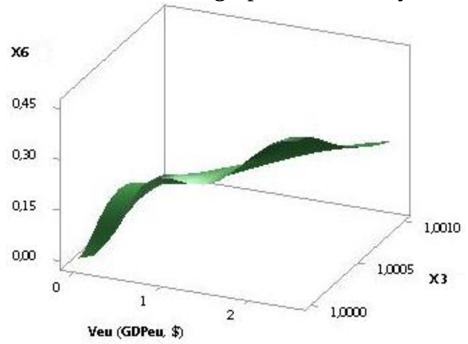

Fig. 18. X6 = f(X1,X2,X3,X4,X5,Veu)

The following two figures 17 and 18 show 3D graphs X6, when the variables were X1= 10..1, X2= X4= X5= 1..10, X3= 1 and X1= X4= X5= 1..10, X2= 10..1, X3=1, respectively. As we can see from Fig. 17 and Fig. 18, the constructed 3D X6 graphs increase by 2.56 and 1.58 times, respectively.

The calculated values for the 3D graph X6 in Figure 19 for variables X1= X4= X5= 1..10, X2= 10..1, X3= 1 has only one value of 1.48 at point 10. From the following Figure 20 it can be seen that for variables X1= X2= X3= 1, X4= 10..1, X5= 1..10 the values of X6 decrease by 1.38 times.

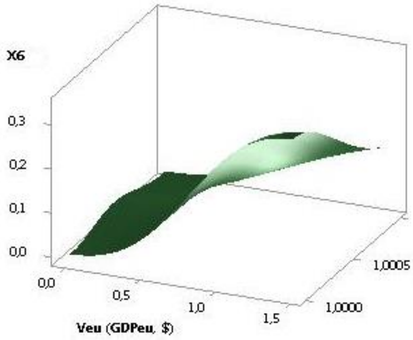

Fig. 19. X6 = f(X1,X2,X3,X4,X5,Veu)

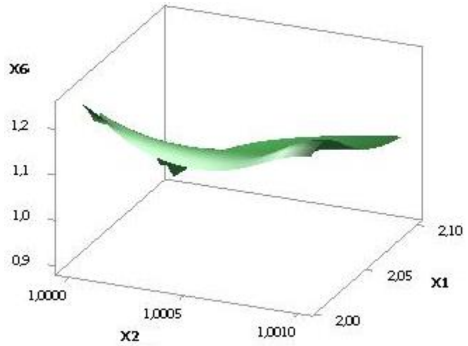

Fig. 20. X6 = f(X1,X2,X3,X4,X5,Veu)

Figures 21 and 22 were constructed at X1= X2= 1, X3= 0.1..1, X4= 10..1, X5= 1..10 and X1= 1, X2= X5= 1..10, X3= 0.1..1, X4= 10..1 respectively. Here in Fig. 21, the values of X6 decrease by 3.14 times, and in Fig. 22 they increase by 1.38 times.

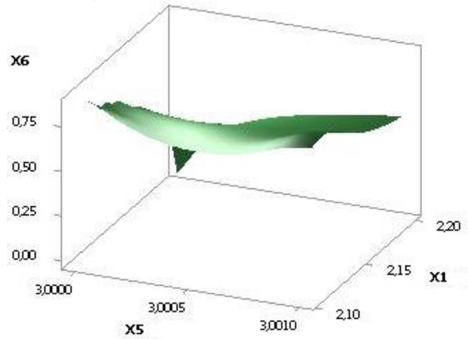

Fig. 21. X6 = f(X1,X2,X3,X4,X5,Veu)

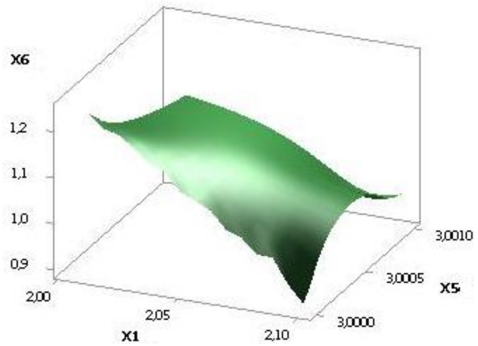

Fig. 22. X6 = f(X1,X2,X3,X4,X5,Veu)

The following two figures 23 and 24 show 3D graphs X6 with X1= X2= X5= 1..10, X3= 0.1..1, X4= 10..1 and X1= X3= 1, X2= X5= 1..10, X4= 10..1 respectively. Here in Figure 23, the 3D graph X6 increases by 1.21 times, and in Fig. 24 by 1.14 times.

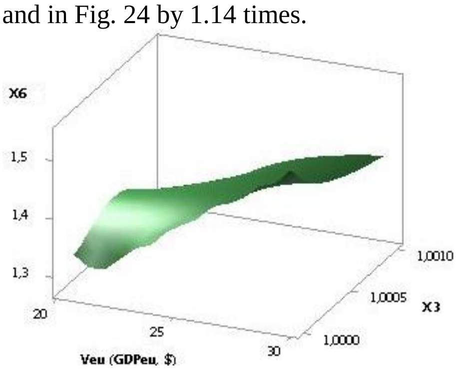

Fig. 23. X6 = f(X1,X2,X3,X4,X5,Veu)

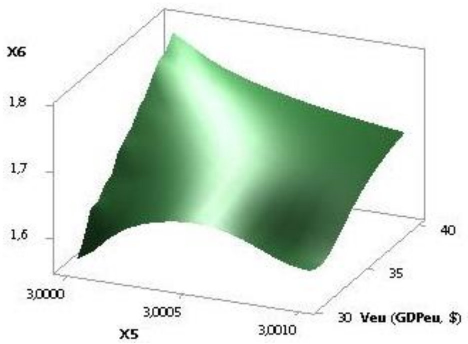

Fig. 24. X6 = f(X1,X2,X3,X4,X5,Veu)

In Figure 25, the dependence X6 was constructed for X1= X2= X5= 1..10, X3= 1, X4= 10..1. Here in Fig. 24, the values of X6 increase by 1.11 times, and in Fig. 26 at X1= X3= 1, X2= X5= 10..1, X6= 1..10 the values of X6 increase by 1.09 times.

Here in Fig. 27 and 28 show 3D graphs for X6 at X1= X2= 10..1, X3= 1, X4=1..10, X5= 9.99..1 and X1= 10..1, X2= X3=1, X4=1..10, X5= 9.99..1. So in Fig. 27 the values of X6 decrease by 1.0111 times, and in Fig. 28 by 1.0105 times.

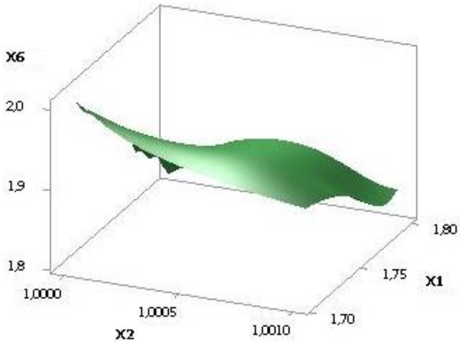

Fig. 25. X6 = f(X1,X2,X3,X4,X5,Veu)

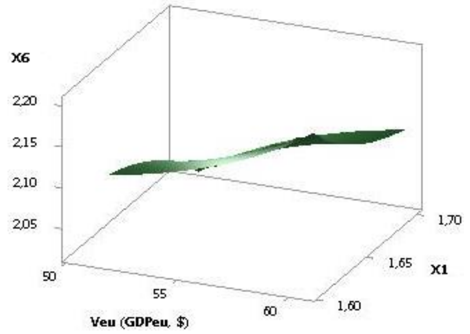

Fig. 26. X6 = f(X1,X2,X3,X4,X5,Veu)

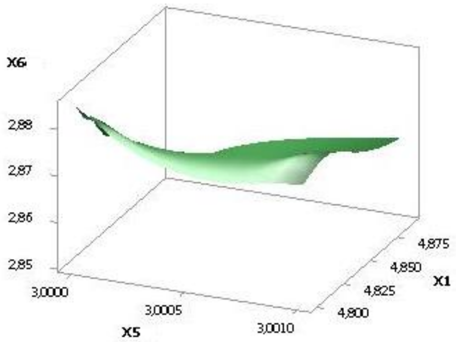

Fig. 27. X6 = f(X1,X2,X3,X4,X5,Veu)

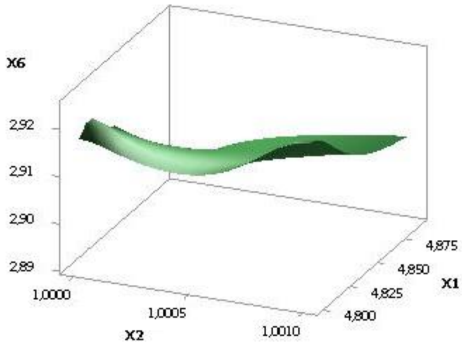

Fig. 28. X6 = f(X1,X2,X3,X4,X5,Veu)

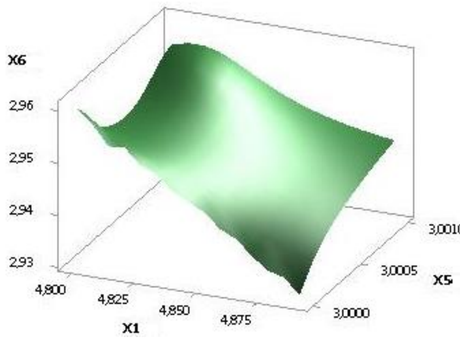

Fig. 29. X6 = f(X1,X2,X3,X4,X5,Veu)

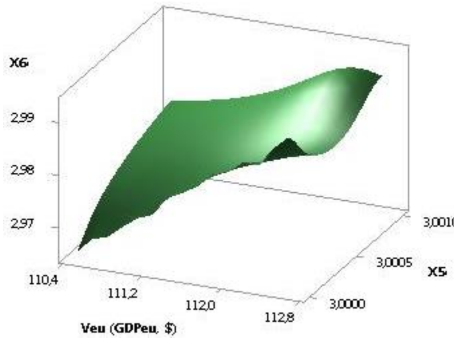

Fig. 30. X6 = f(X1,X2,X3,X4,X5,Veu)

The following two figures 29 and 30 show 3D graphs for X6, when the variables were X1= X5= 10..1, X2= X4=1..10, X4=1 and X1= X4= 1..10, X2= X5= 10..1, X4= 1 respectively. Here in Fig. 29 the values of X6 decrease by 1.01 times, and in Fig. 30 decrease by 1.0096 times.

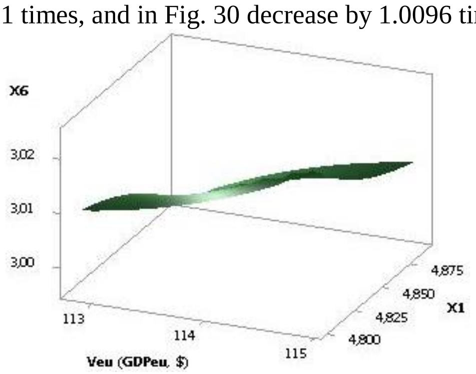

Fig. 31. X6 = f(X1,X2,X3,X4,X5,Veu)

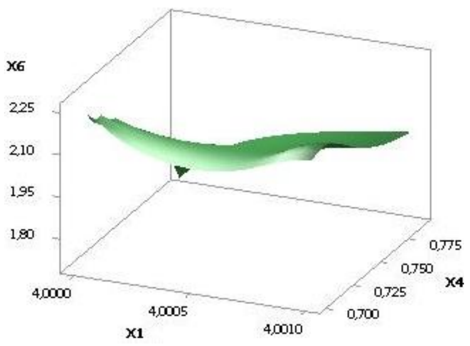

Fig. 32. X6 = f(X1,X2,X3,X4,X5,Veu)

The nest two figures 31 and 32 were constructed at X1= X3= 1..01, X2= X4=1..10, X5= 1..9.99 and X1= X4=1..10, X2= X3=1..01, X5= 1..9.99. Here, in Figure 31, the values of X6 decrease by 1,009 times, and in Figure 32 by 1.31 times.

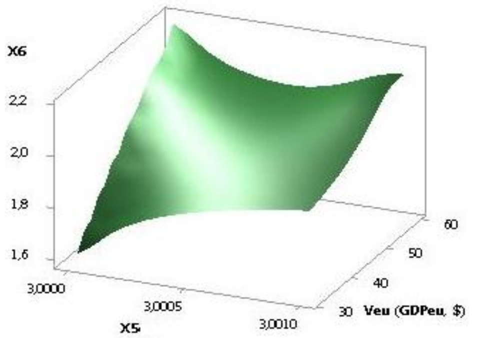

Fig. 33. X6 = f(X1,X2,X3,X4,X5,Veu)

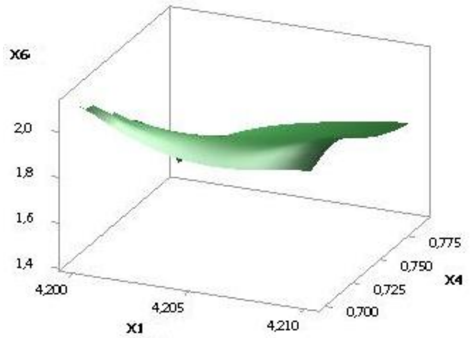

Fig. 34. X6 = f(X1,X2,X3,X4,X5,Veu)

To plotted two 3D graphs in Figures 33 and 34, the following values of the variables X1= X2= X4= 1..10, X3= 1..01, X5= 1..9.99 and X1= X2=X3= 1..01, X4=1..10, X5= 1..9.99 were used. Here in Fig. 33 and 34, the values of X6 decrease by 1.36 times and 1.42 times, respectively.

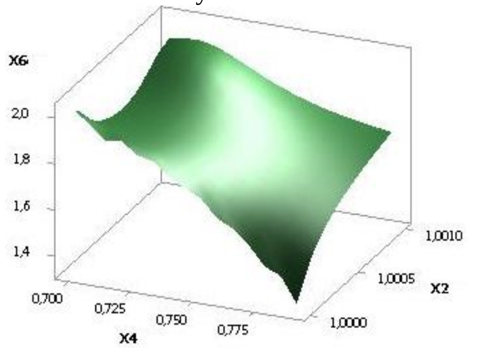

Fig. 35. X6 = f(X1,X2,X3,X4,X5,Veu)

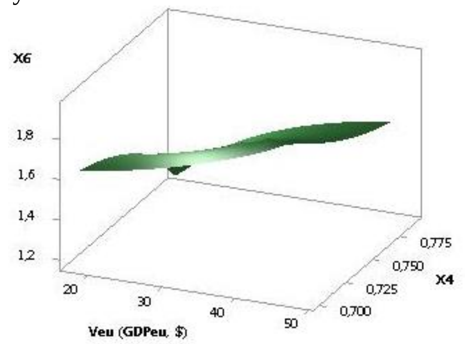

Fig. 36. X6 = f(X1,X2,X3,X4,X5,Veu)

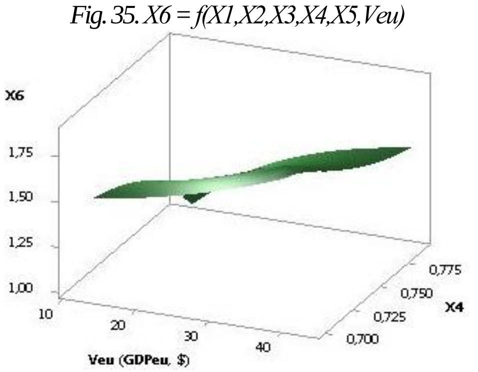

Fig. 37. X6 = f(X1,X2,X3,X4,X5,Veu)

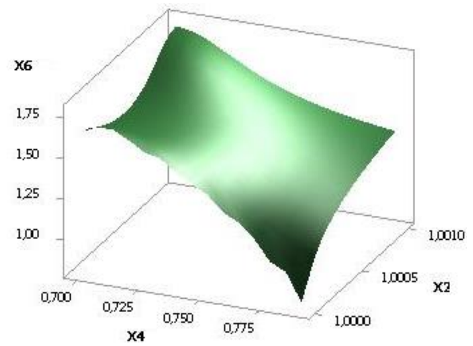

Fig. 38. X6 = f(X1,X2,X3,X4,X5,Veu)

The following figures 35 and 36 were constructed at X1= 1, X2= 10..1, X3= 1..01, X4=1..10, X5= 1..9.99 and X1= X2= 10..1, X3= 1..01, X4=1..10, X5= 1..9.99. Here in Fig. 35, the values of X6 decrease by 1.51 times, and in Fig. 36 by 1.63 times.

The following figures 37 and 38 were constructed at X1= 10..1, X2= X3= 1..01, X4= X5= 1..10 and X1= X3= 1..01, X2= 10..1, X4= X5= 1..10. Here in Fig. 37, the values of X6 decrease by 1.81 times, and in Fig. 38 by 2.15 times.

Here, Figure 39 shows a 3D graph for X6 at X1= X3= 1..01, X2= X5= 1..10, X4= 10, where the values of X6 has a maximum of 2.35 at point 9. The following Figure 40 gives a visual representation that for variables X1= X5= 1..10, X2= X3= 1..01, X4= 10, the 3D graph has a maximum of 2.68 at point 9.

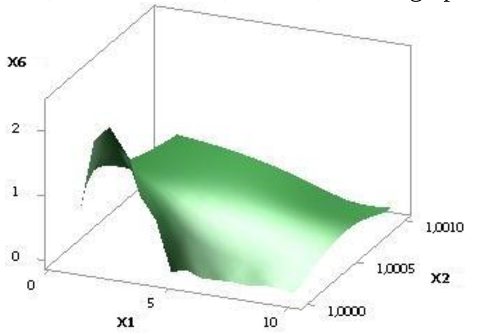

Fig. 39. X6 = f(X1,X2,X3,X4,X5,Veu)

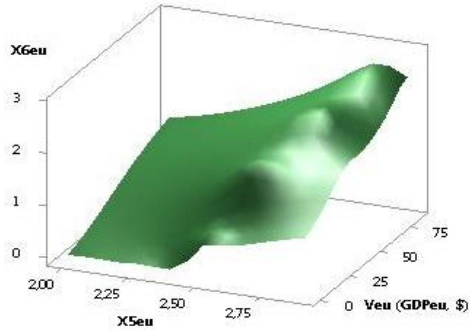

Fig. 40. X6 = f(X1,X2,X3,X4,X5,Veu)

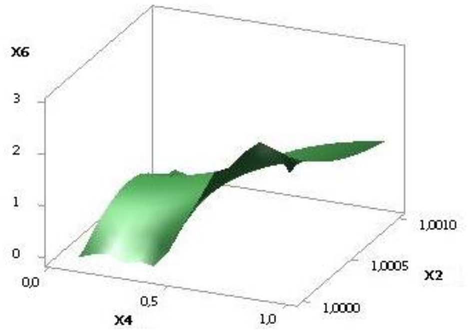

Fig. 41. X6 = f(X1,X2,X3,X4,X5,Veu)

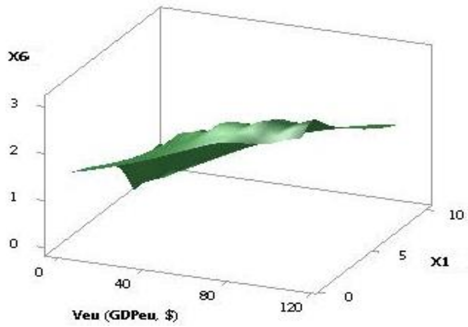

Fig. 42. X6 = f(X1,X2,X3,X4,X5,Veu)

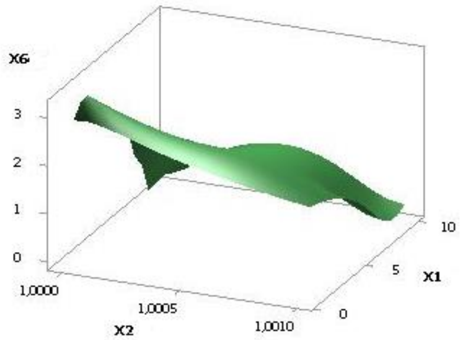

Fig. 43. X6 = f(X1,X2,X3,X4,X5,Veu)

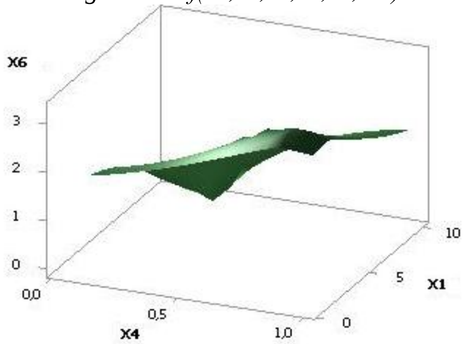

Fig. 44. X6 = f(X1,X2,X3,X4,X5,Veu)

The following two figures 41 and 42 show 3D graphs for X6 = f(X1, X2, X3, X4, X5, Veu) when the variables were X1= X2= X5= 1..10, X3= 1..01, X4= 10 and X1= X2= X4= 1..01, X3= 10, X5= 1..10 respectively. Here in Fig. 39 values of X6 has a maximum of 2.9 in point 9, and Fig. 40 values X6 has a maximum of 3.05 in point 9.

The next two figures 43 and 44 were built with X1= X3= 1..01, X2= 1..10, X4= 10, X5= 10..1 and X1= 1..10, X2= X3= 1..01, X4= 10, X5= 10..1. Here in Figures 43 and 44, the constructed 3D graphs for X6 has maximum of 3.17 and 3.25 at points 9, respectively.

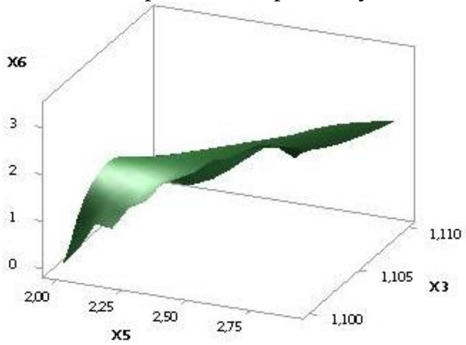

Fig. 45. X6 = f(X1,X2,X3,X4,X5,Veu)

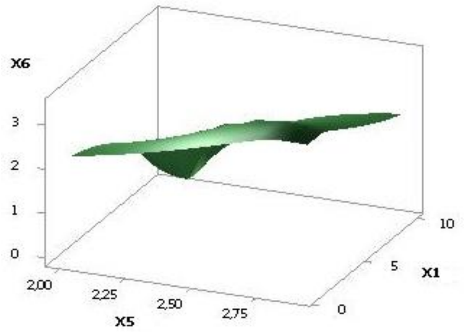

Fig. 46. X6 = f(X1,X2,X3,X4,X5,Veu)

The following values of the variables X1= X2= 1..10, X3= 1..01, X4=10, X5= 10..1 and X1= X2= X3= 1..01, X4=10, X5= 10..1 and X1= X2= X3= 1..01, X4= 10, X5= 10 were used to construct two 3D graphs in Figures 45 and 46..1. In Figure 45, the presented 3D graph for X6 has a maximum of 3.33 at point 9, and in Figure 46 by 3.38 times, respectively.

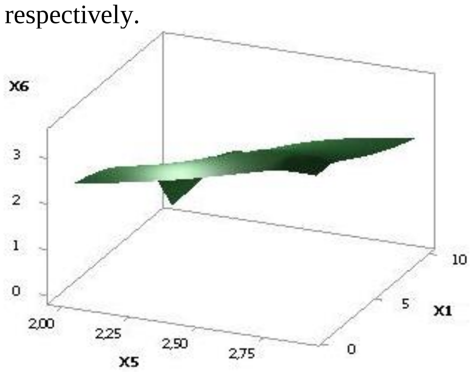

Fig. 47. X6 = f(X1,X2,X3,X4,X5,Veu)

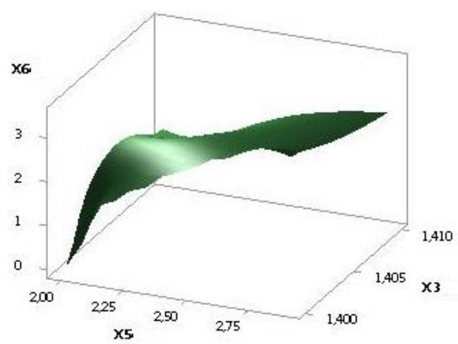

Fig. 48. X6 = f(X1,X2,X3,X4,X5,Veu)

Figures 47 and 48 were constructed at X1= 1..01, X2= X5= 1..10, X3= 0.1..1, X4= 10 and X1= X5= 1..10, X2= 1..01, X3= 0.1..1, X4= 10. Here in Figure 47, the values of X6 has a maximum of 3.43 at point 9, and in Figure 48 has a maximum of 3.47 at point 9.

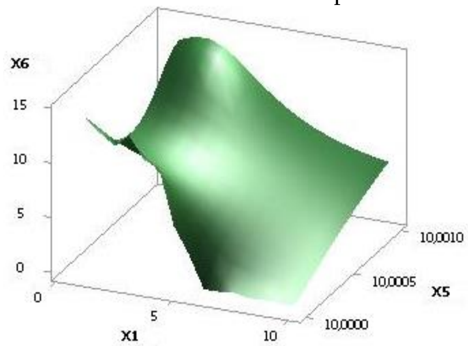

Fig. 49. X6 = f(X1,X2,X3,X4,X5,Veu)

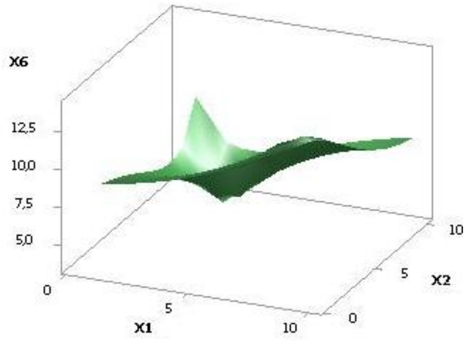

Fig. 50. X6 = f(X1,X2,X3,X4,X5,Veu)

Latest figures 49 and 50 were built with X1= X2= X5= 1..10, X3=0,1..1, X4=10 and X1= X2= 10..1, X3= 0,1..1, X4= 10, X5= 1..10. Here in Fig. 49 values of X6 reduced by 2.6 times, and Fig. 50 has a minimum of 3.73 in point 3.

Below is a summary table 1 calculation of the variable X6, as well as the values presented X6euf / X6eub, which represent the ratio X6euf, i.e., the final volume of economic sheath to primary X6eub.

This ratio can take the following three values

1. X6euf / X6eub > 1 - when the country's GDP is growing;
2. X6euf / X6eub = 1 - when the country's GDP does not change;
3. X6euf / X6eub < 1 – when the country's GDP decreases.

In addition, this table is divided into groups by the number of variables. So, for example, if we consider 1 variable from this table, it means that only one variable affects the country's GDP, which, of course, is easier to apply than a larger number of variables to get out of the economic crisis. Here X6euf / X6eub are arranged in descending order of their values. So, based on Table 1, and analyzing the first group with one variable, you can see the following:

1. X6euf / X6eub > 1 are located in rows 1 - 41;
2. X6euf / X6eub = 1 are located on only one line 42;
3. X6euf / X6eub < 1 are located in lines 43 - 51.

Thus, using one variable, we can use 41 options that allow us to lead the country out of the economic crisis. At the same time, there is only one option, using which the country's GDP will be unchanged during the economic crisis. The remaining options, starting from line 43, cannot be used, since in this case the country's GDP will decrease. At the same time, it should be noted that using one variable allows you to increase the country's GDP by 52.39 times the most, as can be seen from line 1.

Conclusions: The calculations carried out and Table 1 presented allows economists to choose ways out of any economic crisis.

Abstract

The native theory of worldview self-identification of mankind we associate with the nature of philosophy detected through the search for “grounds” of philosophy, science and religion. Science is moving in contradiction, contradiction of truth, lies and delusion, religion (and “simulacris”) – a contradiction of knowing thinking and its simulation, “imitation”. Located “between” with them, philosophy is introduced into the essence of their antagonism, “opposites of opposites”, synthesizing ontology and gnoseology, detecting and combining the types of world-weather, diving on materialism and idealism.

For native philosophy, it is logical to start with the philosophy of Russian cosmism, which begins with the criticism of the contemplative peace (man’s submission to the world, his substance) and underlining activism (justifying the human domination over the world) with a support for religion and idealism, later on science and technique. In the twentieth century, Marxism spread in the country. All reality, he generally denotes moving matter or material motion. With the ability to build a new and develop from a simple to complex, the world generates a person, through whose activity is being prolonged, their subsequent joint development (coevolution) is increasing. Overcoming one-sidedness of contemplative and activist paradigms. Three basic types of worldview self-identification of mankind (contemplation, activism and coevolution) are revealed, their synthesis in a generalizing model. The relationship between nature and man is revealed. Being inside the nature, he “learns” to regulate its processes, freeing the story from uncontrollable forces. This turns materialism into a “practical theory” of conversion of matter.

From the side of the simulation trend, there is a resistance to such a transformation, the opposite of positive and negative dialectics, climbing and descent, progress and regression, truth and imitation is sharpened: the context of the second becomes the basis for the forms of alienation of a mankind from being (mechanism and its analogues). They need overcoming to solve the cardinal problems of modernity. The opposite trend in philosophy is developing idealism. For a replacement of humanistic ally “positive utopias” of the comprehensive development of a mankind, dubious projects of the transition from a man to super- and post-depletive creatures came. Their danger is to “implement” in conditions of capitalism. Their connection with the refusal to the concept of truth, which included in history with the arrival of “axial time” (K. Yaspers) was proved. The study methodology is the ideas of materialism and dialectics, the principle of systemic and development, historical and logical, ascent from the abstract, theory of theory and practice.

Keywords: modern worldview self-identification, truth, Prehistory and History, deep historicism, cosmism, contemplation, activism, positive dialectics, negative dialectics.
