INTRODUCTION

Various authors dedicated a huge amount of their works to the issue of economic and financial crisis and offered their ways out of the crisis. Although, unfortunately, none of works succeeded in the profound solving of the problem. Due to this fact the author of this work suggests to use the theory of the economic shell in order to describe processes in economy suffering from crisis. This theory gave an opportunity to design theoretic scenarios of economic crisis development and to perform calculations which help to indicate the probable methods to be used in recovering from any type of economic recession. These methods enable government to choose an appropriate way out of the particular crisis without loss and even with the increase of gross domestic product of a country.

The book is dedicated to my son *Mikhail* and grandson *Stepan*, and to my late beloved parents and elder brother.

Wishing you all the best.

Yours sincerely, Author
