ANALYSIS OF 3D VEU GRAPHS USING THE X4 VARIABLE

The article below discusses the issue of calculating the variable X4, which affects the values of GDP (GDP). The values obtained during the calculations are shown in the form of 3D graphs for X4. In this case, the variables are constant, decrease and increase. That is, the article considers the dependence of the change $X4 = f(X1, X2, X3, X5, X6)$ [1, 2, 3].

Here, Figure 1 shows a 3D graph for X4 at $X1 = X2 = X5 = 10..1$, $X3 = 1$, $X6 = 1..10$, where the variable X4 has zero values.

The following Figure 2 gives a visual representation that for variables $X2 = X5 = 10..1$, $X1 = X3 = 1$, $X6 = 1..10$ the values of the 3D graph increase by 1.17 times.

The following two Figures 3 and 4 show 3D graphs for $X4 = f(X1, X2, X3, X5, X6)$ when the variables were $X1 = X5 = 10..1$, $X2 = X6 = 1..10$, $X3 = 1$ and $X1 = X6 = 1..10$, $X2 = X5 = 10..1$, $X3 = 1$, respectively. Here in Figure 3, the variable X4 has zero values, and in Figure 4, the value of X4 increases by 1.01 times.

Fig.1. $X4 = f(X1, X2, X3, X5, X6)$

Fig.2. $X4 = f(X1, X2, X3, X5, X6)$

The following two figures 5 and 6 were constructed at $X1 = X2 = X3 = 1$, $X5 = 1..10$, $X6 = 10..1$ and $X1 = X3 = 1$, $X2 = 0.1..1$, $X5 = 1..10$, $X6 = 10..1$. Here in Figures 5 and 6, the constructed 3D graphs for X4 increase by 1.16 and 1.67 times, respectively. To construct two 3D graphs in Figures 7 and 8, the following values of the variables $X1 = 1$, $X2 = X5 = 1..10$, $X3 =$

0.1..1, $X_6 = 10..1$ and $X_1 = X_2 = X_5 = 1..10$, $X_3 = 0.1..1$, $X_6 = 10$ were used..1. Here Fig. 7 the value of X_4 increases by 1.75 times, and in Fig. 8 it increases by 1.21 times.

Fig.3. $X_4 = f(X_1, X_2, X_3, X_5, X_6)$

Fig.4. $X_4 = f(X_1, X_2, X_3, X_5, X_6)$

Fig.5. $X_4 = f(X_1, X_2, X_3, X_5, X_6)$

Fig.6. $X_4 = f(X_1, X_2, X_3, X_5, X_6)$

The following figures 9 and 10 were constructed at $X_1 = X_3 = 1$, $X_2 = 1.0..1$, $X_5 = 1..10$, $X_6 = 10..1$ and $X_1 = X_3 = 1$, $X_2 = X_5 = 1..10$, $X_6 = 10..1$. Here in Fig. 9, the X_4 value increases by 1.75 times, and in Fig. 10 it increases by 1.03 times. The last figures 11 and 12 were constructed at $X_1 = X_2 = X_5 = 1..10$, $X_3 = 1$, $X_6 = 10..1$ and $X_2 = X_3 = 1$, $X_1 = X_6 = 10..1$, $X_5 = 1..10$. Here in Figures 11 and 12, the X_4 values have minima of 0.99660 and 0.999906 at points 6 and respectively.

Fig.7. $X_4 = f(X_1, X_2, X_3, X_5, X_6)$

Fig.8. $X_4 = f(X_1, X_2, X_3, X_5, X_6)$

Fig.9. $X4 = f(X1, X2, X3, X5, X6)$ Fig.10. $X4 = f(X1, X2, X3, X5, X6)$ Fig.11. $X4 = f(X1, X2, X3, X5, X6)$ Fig.12. $X4 = f(X1, X2, X3, X5, X6)$
